

Coffee roasting equipment

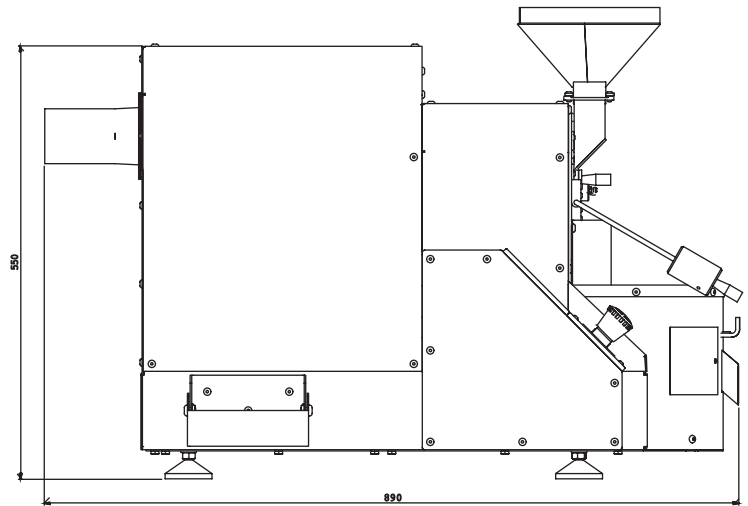

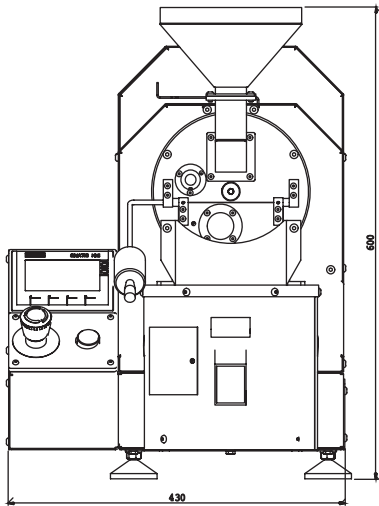

LR300

- The LR300 Roasting Machine is the ideal tool for laboratory tests and coffee sampling.
- The best of IMF R & D has specially developed technologically advanced solutions for this small roaster, making it the ideal laboratory tool for quality control tests performed on raw coffee, or for the research of new aromatic notes, thanks to the perfect control of temperature and speed of the toasting air, allowing to develop a large variety of toasting profiles.
- The Lab Roaster 300 is available with electrical resistance heat generator and manual control system.
